Bhavesh, Ketu, Simar, Jonathan

# The Problem

- Job application online
- Lack of organization
- Too many sites
- Can't track progress

# The Solution: JAM

- Job Application Manager
- Simple, feature filled
- One place for all information

# Audience

- Prospective job candidates
- College Students
- Career Development Offices

# Market & Competitors

- Market: Self Job Application Manager
- Competitors: LinkedIn, Handshake, Glassdoor, etc.

# JAM Features

- Homepage
- Dashboard - JAM Jars
- User Profile
- Register/Login

# Technologies

**Frontend:**

- HTML, CSS, JS
  - Bootstrap
  - JQuery
  - AJAX

**Backend:**

- PHP
  - Sessions
  - Queries
  - Auth

**Database:**

- MySQL
  - Users
  - Jars with info

# User Experience

- Simplistic Design
- Jar fill and badges
- Multiple user areas
- Notifications

# User Experience (continued)

- Optimizations
  - Minimal JS
  - Images not in DB
  - CSS Animations

# Backend

- Authentication / Authorization
- Database
  - Displaying JAM Jars
  - User Info
  - Sort By Button

# Backend (continued)

- Security
  - Input sanitization
  - PDOs
  - Form validation

Demo

# Future Plans

- Connecting JAM to be able to accept credit card payments (Premium users will have to pay $5 dollars/month)
- Supporting login/sign up methods such as CAS, Google, Facebook, etc.
- Premium Users would have the opportunity to access a page filled with opportunities by other companies that they can add to their dashboard

Thank you
